**Links between foliar and soil chemistry in the Black Triangle, Czech Republic**

PI’s William H McDowell UNH and Jacqueline Aitkenhead-Peterson TAMU

Collaborators: Barry Rock (University of New Hampshire), Jana Albrechtova (Charles University, Prague), Jakub Hruska, Pavl Kram and Dana Fottova (Czech Geological Survey). Funded by an NSF International Supplement – No cost extension until 07/31/07

This research commenced during Summer 2003. Jess Alexander (MS 2005) linked foliar chemistry to soil chemistry and did a soil survey of Pluhuv Bor and Lysina watersheds. In 2004 a team from USDA Forest services and UNH collected foliage and soils for the analysis of organic acids. During 2005 we will collect soils from transects in a further twelve watersheds to explore the link between soil characteristics and streamwater chemistry.
